

Evo4 Incremental Processor

ncremental processing unit for plate size up to 120 x 160 cm (47x63 inch). As all Vianord processors, it is equipped with a pre-wash section for digital plates with a separate tank for the black layer. During the washout the plate moves at a constant speed along the whole process.

The Plate holder at the bottom of the ma-

chine allows the user to store rolled plates to avoid any damage and have them ready to use. • The Pin bar storage section can carry up to

8 pin bars. · The integrated auto-

matic rollaway punch automatically opens when the front lidis opened. Then it is enough to position the plate in the device to have it pierced with precision. The number of times the punch pierces the plate is programmable according to the user's preferences.

WASHOUT SECTION

Digital washout with separate pre-wash section to prevent contamination

- of the main washout solvent with black layer
- 2 pre-wash brushes (oscillating and rotating)
- 10 washout brushes (oscillating and rotating)
- 1 top cleaning brush (oscillating and rotating)
- 1 wiping brush (oscillating and rotating)
- 2 back cleaning

brushes (rotating) New volumetric pump and sensitive pressure sensor allow a higher precision solid content analyzer

Automatic solvent replenishment system

Fresh solvent consumption control over the machine life cycle and programmable over a time frame

· Fresh solvent flow regulation option on the touch screen

· Constant solvent temperature thanks to water circulation serpentine

 The new "3D Brush Motion" system with servo drive motors enables a soft mechanical start

which results in less vibrations and a much more quiet 3Dmachine. It also provides a constant and repetible washout speed; in fact, the new system, adjustable from the display, automatically synchronizes the brushes rotation and oscillation speed to the plate transfer speed; so that bristles hit the plate, thin or thick, always at the same speed

OTHER FEATURES

- 30 x 30 cm rotating and tilting touch screen display
- Programmable automatic solvent warmup

Automatic standby after the last plate processed

- Remote access (optional)
- Active component visualisation during the process
- Manual function to run the components separately

Memorisation of the plate process parameters (up to 24 channels)

3D Brush Motion
